

About EVDS

The Electronic Data Delivery System (EVDS) is a dynamic and interactive system that presents statistical time series data produced by the CBRT and/or data produced by other institutions and compiled by the CBRT. These data are published on dynamic web pages. They can also be reported in the xls format or through the web service client (json, csv, xml), viewed in the graphics format, and received via e-mail by subscribing to the system. The EVDS was first introduced in 1995 and is available in Turkish and English.

The system provides a rich range of economic data and information to support economic education and foster economic research. Its technical infrastructure was revised in October 2017. The EVDS serves the public with its new facilities and content such as the REST web service, Customization, Reports, Interactive Charts, Frequently Used Data Groups, Recently Updated Data Groups, and data displayed on Turkey and world maps.
